

Ayoub Oueslati

Riga, Latvia | [Portfolio](#) | ayoubweslati00@gmail.com | linkedin.com/in/ayoub-weslati | github.com/ayouboueslati

Summary

Full-stack software engineer with back-end and full-stack development experience across the complete software development lifecycle – requirements gathering, implementation, code reviews, automated testing, and production operations. Skilled across multiple programming languages (Python, TypeScript, PHP, Kotlin) and comfortable adapting quickly to new technologies and business domains. Built R&D-oriented systems including an AI-powered semantic recommendation microservice, event-driven architectures, and CI/CD pipelines with automated testing and static code analysis. Experienced collaborating with international, cross-border teams and clients, translating technical implementation details into clear, professional communication for non-technical stakeholders.

Skills

Backend: Python, FastAPI, Node.js, PHP, Symfony, .NET, SQLAlchemy, Alembic, Kafka, Weaviate

Databases & Caching: PostgreSQL, Redis

Frontend: Next.js, React, TypeScript, JavaScript, Tailwind CSS

Mobile: Flutter, Kotlin, SwiftUI, Ionic

SDLC & Engineering Practices: Code Reviews & Static Analysis (SonarQube), Automated Testing (JUnit), CI/CD Operations (Jenkins, GitHub Actions), Monitoring (Grafana), Containerized Deployment (Docker)

Design: UI/UX Design, Figma

Freelance Projects

Full-Stack Developer — *The Chillery — Live E-commerce Platform (International Client)* 2025
[Next.js 14](#), [TypeScript](#), [Tailwind CSS](#), [Python](#), [FastAPI](#), [PostgreSQL](#), [Redis](#), [Docker](#), [Square API](#)

- Engineered a full-stack e-commerce platform using Next.js and Tailwind CSS for a premium, responsive frontend, backed by a high-performance, fully asynchronous FastAPI and PostgreSQL backend, delivered end-to-end for a US-based client.
- Designed a secure, end-to-end payment processing pipeline integrating the Square Web Payments SDK on the frontend for tokenization and the Square API on the backend for charge execution.
- Architected an asynchronous, non-blocking API leveraging SQLAlchemy (asyncpg) and Redis as both a cache and message broker for background task processing via Celery.
- Implemented RBAC with JWT authentication, rate limiting, and automated background reconciliation loops to ensure transactional integrity for orphaned payments.
- Built a persistent, state-driven shopping cart and multi-step checkout flow using React Context and local storage.

Full-Stack Developer — *Nour Distribution — ERP System* 2025
[Next.js](#), [React](#), [FastAPI](#), [PostgreSQL](#), [SQLAlchemy](#), [ReportLab](#), [Docker](#), [Recharts](#)

- Built a production-ready ERP system for a distribution business, covering inventory management, order processing, invoicing, and client relationship management – gathering requirements directly from business stakeholders and translating them into technical specifications.
- Developed a high-performance async REST API with FastAPI and PostgreSQL, implementing JWT authentication, RBAC, and Bcrypt password hashing.
- Engineered automated PDF generation for quotes, invoices, and credit notes compliant with local tax regulations, using ReportLab with QR code integration.
- Built interactive business intelligence dashboards with Next.js and Recharts to visualize sales trends, stock health, and inventory turnover.
- Hardened the production Docker deployment with non-root execution, read-only filesystems, dropped capabilities, and Docker Secrets for credential management.

Experience

Software engineer — *Hendrik Thurau Enterprises, Switzerland* Jan 2025 – Jul 2025
Booking & Event Management System for Boats and Lake Tours

- Worked directly with the client's technical and business stakeholders to translate real-world operational requirements into a full-stack booking and tracking application (Ionic, Angular, Capacitor), shipping native iOS/Android builds with background geolocation.
- Implemented interactive mapping and live route rendering with Leaflet and Turf.js, synced in real time via Socket.io.

- Built the backend with Node.js, Express.js, and MongoDB (Mongoose), using Kafka and Zookeeper for event-driven communication across microservices.
- Integrated a dedicated Python FastAPI microservice using Hugging Face Transformers (multilingual-e5-large-instruct) to generate embeddings stored in Weaviate for semantic, R&D-driven event recommendations.
- Handled background job processing with Bull (Redis) and Agenda (MongoDB), and integrated Stripe for in-app payments.
- Containerized the system (API, MongoDB, Kafka, Zookeeper, Weaviate, ML service) with Docker Compose and automated CI/CD via Jenkins, including staged testing prior to deployment.

Mobile Developer — *Tabaani Travel Agency, Tunisia*

Jun 2024 – Sept 2024

- Developed a mobile application for a travel agency to streamline booking and trip management.
- Implemented back-end services using Node.js to handle client data and itineraries.

Mobile Developer — *SportDivers, Tunisia*

Jun 2024 – Sept 2024

- Built a cross-platform web and mobile application to manage schedules, attendance, and payments for a sports center.
- Integrated features such as a dashboard, chat module, and online payment system.

Computer Science Intern — *Electronic Payment Department, Tunisia*

Aug 2021 – Sept 2021

- Worked on projects related to electronic payment systems.
- Gained expertise in optimizing electronic payment processes.

Education

Private Higher School of Engineering and Technology

Software Engineering — Minor: Mobile Development

EKA University, Riga, Latvia

Evening MBA – starting September 2026

Other Projects

DevOps Project: Automated CI/CD Pipeline —

Sep 2024 – Dec 2024

Spring Boot, Vagrant, Jenkins, SonarQube, Docker & Docker Compose, Maven, Git, Grafana, JUnit, Nexus

- Designed and implemented a full CI/CD pipeline for a Spring Boot application, covering the software development lifecycle from build through automated testing to production-style deployment.
- Enforced code review and quality gates with SonarQube static analysis, and validated reliability with automated JUnit test suites at every pipeline stage.
- Set up monitoring and operational visibility with Grafana, and managed build artifacts through Nexus.

Additional Projects: Job Finder Platform for Renewable Energy (SwiftUI, Kotlin, Flutter) · Iqraa, a Spiritual Guide App (Flutter, VueJS, Node.js, Hedera) · Artistic Avenue, cross-platform app for artists (JavaFX, Symphony) · Robotic Club Website (PHP, JavaScript)
